This health survey is copyrighted and may not be reprinted or used in any way without the express written consent of the HCA.

## *A Survey of the Health of Havanese Dogs in 2004 By the Havanese Club of America (HCA)*

**Sponsored by HCA Health Committee:**

**Joanne Baldwin DVM, Chair - Mary Cane - Joan Little -  
Roberta Lowry - Margie Staniszeski**

**Jane Ruthford, Project Leader**

Using SurveySuite's service on the internet's World Wide Web,  
anonymous owner input for pet breeding and show dogs was received  
from the USA as well as many other parts of the world.

# Appendix A: Vaccinations

Q 2.15 Other vaccinations this dog was given in the First Year of life, specified by the Survey Participant	Count
Parainfluenza & Adenovirus type 2.	1
Adeno/parainfluenza	1
adenovirus,para,bordetella	1
All that are asked for in Sweden	1
all that breeder recommended	1
bordatella ;adeno-flu	1
Bordatella, Aden., Para...	2
bordatella, DHLPCPv, also separate Parvo and Coron	1
Bordatella, Interceptor monthly heartworm pill	1
Bordatella,, Distemper/Combo, Corona	1
Bordetella & Parainfluenza	1
Bordetella, Corona	1
Bordetella, parainfluenza	1
DA2LP	3
DA2-PP4L Series & Bordatella	1
distemper-measles-hepatitis, parainfluenza, parvo	1
dog came in from overseas.	1
early shots given in Hungary	1
giardia, corona, bortedella	1
guiardia	1
I follow mentor's advice	1

Q 2.15 Other vaccinations this dog was given in the First Year of life, specified by the Survey Participant	Count
I just don't know if they were combo or single	1
kennel cough, giardia	1
Lepto given separately	1
Leptospirosis with rabies	1
leptospirosis with the rabies vaccine	1
my breeder told me not to give the dog lepto and c	1
Parainfluenza, Bordetella	1
Progard 5	1
Progard 5, Nemex-2, DHPP-CCV	1
She had DHL-P, Parvo, Corona, Bordatella, Rabies	1
shipped from Europe	1
Single dose Lepto	1
titers	1
We said no Corona per breeder recommendation	1

# Appendix A: Vaccinations

Q 2.16 Other Vaccine(s) these Adult Havanese are currently up-to-date upon receiving	Count
All that are asked for in Sweden	1
Allergic to rabies and distemper/parvo vaccination	1
Bordatella no Lepto	1
Bordatella, Heartworm & Ophth. ointment	1
Bordatella, Interceptor heartworm pills monthly	1
bordatella; adeno-flu	1
Bordetella, Corona	2
bortadella, giardia	1
Corona, Bordetella	1
deceased	3
DHPP and rabies	1
DHPP, Bordetella	2
guiardia	1
Heartworm	2
kennel cough, giardia	1
leptospirosis	2
leptospirosis with the rabies	1
too ill for immunization	2
We do titers. Hasn't been vaccinated in 3 years	1

# Appendix A: Vaccinations

Q 2.17 If on a regular schedule, how frequently is this Havanese Vaccinated? (This question should have been worded better.)	Count
As recommended by vet	9
depends on vaccination type	1
haven't decided	1
Still under one year of age	1
after 18 month boosters will be every three years	2
is a puppy still	19
as needed	2
Bort 6 month; Rabbies 2 years and now less I belie	2
check-vaccinated 6mo	1
depends on vaccine	1
every 1 1/2 years	1
Every 2 years for the others. Rabies every 3 yrs.	1
every year for a few years, then less frequently	1
has been yearly; new vet so now every 3 yrs	1
Have not vaccinated in 7 years	1
He's just over a year old so I don't know yet.	1
he's on a wellness plan and I'm called when due	1
I am going to look into every two years	1
Manufactures recommendation	1

Q 2.17 If on a regular schedule, how frequently is this Havanese Vaccinated? (This question should have been worded better.)	Count
not sure	1
Only as puppy and one year then never again	1
only Rabies	1
Parvo every year, rabies every year, distemper/2 y	1
puppy-will be vaccinated yearly	1
Rabies every 3 years; others yearly	2
Rabies every 3, others as needed by titers.	1
Rabies every three years other vaccines as recomme	1
Rabies every three yrs. Others vacs irratic~2 yrs	1
rabies every year	3
Rabies give every year, others given every other y	1
rabies regularly	1
Rabies three years; others as required (one year?)	1
rabies every 3 years	3
rabies yearly, other every 2 years	1
She'll get a 1 year booster then every 3 years.	1
unknown	1
was yearly	2
was yearly, now every three	1
whatever my breeder and my vet tell me to do	1
will do yearly	2
will get vacs in year 2 then go to every three	1
Yearly DP2HP, 3 year rabies	1
Will go on a three year schedule when he reaches 3	1
with parvo and bordetella at 6 month intervals	1

# Appendix A: Vaccinations

Q 2.21 Vaccines Avoided or Given that were not covered in survey questions. Reasons given.	Count
Bortetella given (often because of showing, classes, and boarding)	19
Vaccinations given: Distemper, Adenovirus 2, Parainfluenza, Parvovirus, Bordetella, Rabies. My vet's record of names did not seem to match the vaccination names given above.	1
6mo Heartworm shot / I believe it is too much for toy dogs to handle. Have known it to cause head twitching.	1
Added Distemper-Hepatitis(CAV2) Parainfluenza Canine Parvovirus	1
Added Heartworm - currently 2 x year	1
Added Heartworm vaccine 2 x year	1
Advised to avoid Lepto, not sure about Corona. Like I mentioned in 2.15 I follow my mentor's advice I trust her completely!	1
all immunization avoided for this dog is too ill	1
all immunization discontinued for the animal is too ill	1
All vaccine are given to this dog that are required in Sweden. No more and no less	1
All vaccines avoided except rabies, as required by law. Yearly titers run.	2
Avoidance due to personal beliefs.	1
Avoided giving any vaccinations after first year (including rabies) because of negative reactions to rabies (large swelling and then all the hair on that golf ball size lump fell off). Swelling of lymph nodes and respiratory problems after her parvo/diste	1
Because we have not been able to explain the multiple blood panel findings we have stopped vaccines and have not yet done rabies. Tests show low albumin(2.04), low cholesterol(79), low triglycerides(22) and alkaline Phos 532. We do not know what to do r	1

# Appendix A: Vaccinations

Q 2.21 Vaccines Avoided or Given that were not covered in survey questions. Reasons given.	Count
Bordatello-Given the first 2 years and came down with Kennel cough anyway. I have discontinued giving the vaccine to my dogs. it seems rediculous to give a vaccine every 6 months and it still not protect them.	1
bordetella (4H requirement) Vet does not recommend-believes dogs are overvaccinated	1
Corona vaccination not needed	2
Corona, because there is no documentation of the disease in any population of dogs where we live, Leptospirosis, because it can cause adverse reactions in Havanese and again, very, very infrequent in local animals except for coyotes and my dogs don't go n	1
Didn't understand above descriptions, so this is what he had: Parvovirus; Distemper; Hepatitis (CAV); Parainfluenza	1
Do not feel they are necessary	1
do not use "kennel cough" vaccine	2
Dog receives no vaccines other than rabies.	1
guardia, bordatella	1
Have since learned the Corona was not recommended so will not give, in future. Did not do Titters as vet said he felt the protection was good for a few more years and there was no need	2
Have tried to continue with what my breeder started and recommended. Do consider best advice of vet of 30 + yrs for issues pertinent to my locale.	1
He did have a reaction (swelling in his face) most likely due to the Lepto so he will not be geting them any longer.	1
I also give Corona, a puppy disease. Though rare, I have a friend whose dog died from Corona. Diagnosis is only made via necropsy.	2
I am trying to avoid unnecessary vaccinations.	1
I avoid lepto until 16 weeks of age	1

# Appendix A: Vaccinations

Q 2.21 Vaccines Avoided or Given that were not covered in survey questions. Reasons given.	Count
I avoid rabies except as required by law, as my dog only goes out on leash, and therefore will not likely be at risk for rabies. I do not believe in vaccinations except in the presence of a real threat.	1
I avoid them. I do not believe they are necessary. Her breeder on the first 2 shots given way too early did not avoid them.	1
I believe firmly that regular vaccinations are not needed - in my area of residence. Nor is heartworm med given. Too many dogs are over-vaccinated which, I also believe, can lead to autoimmune conditions as the body rebels against the very thing tha	1
I don't have the health records here to confirm which vaccinations are used. I doubt any avoidance was done. This is a rescue owner turn-in.	1
I don't know the answers to 18, 19 or 20	1
I feel that Lepto and Corona are not necessary.	1
I have not been approached about the leptospiros or the corona vaccines, unless they are included in the 5 in 1 booster he receives	1
I keep up with the Rabies vaccine for legal reasons and gave initial Parvo/Distemper vaccines for protection as a puppy. All other vaccines are avoided as I do not believe they are necessary and am worried they could do harm.	1
I know of two deaths in other breeds found to be Corona at necropsy	18
I know this dog as a rescue owner turn-in. I don't have the medical records now to verify info. However, she did have a local reaction to her last rabies vaccination, lump and hair loss.	1
I now give titers, would never give lepto or corona now knowing what I do.	1
I only know of the DHLPP, lymes disease and kennel cough being given to my dog, and I don't know what DHLPP stands for, so was unable to answer questions 2.18, 2.19 and 2.20	1

# Appendix A: Vaccinations

Q 2.21 Vaccines Avoided or Given that were not covered in survey questions. Reasons given.	Count
I previously did lepto and corona,now I never do	1
I really don't know if she has had the leptospirosis vaccination or not. These questions are a little too technical for me to answer.	1
I used lepto and corona at first will not now knowing what I know	1
I used to give lepto and corona have not now that I know it is bad.	1
I vaccinate only as a pup and again at about one year old...after that, only rabies about every 4 years.	1
I want to fill this survey. My breeder is sick so I don't want to bother her. He has had the rabies and the 5 in one Parvo. I'll ask her about this question and send in a response next week. Is this O.K.? My email is	1
I'm doing this at work and don't have my dog's records with me. In general, I trust my vet's judgement.	1
I'm not sure	1
Interceptor monthly for heart worms is given.	1
Lepto and Rabies shots are avoided with this dog. He had an anaphylactic reaction 5 minutes after the shots each of these for a total of 2 times.	1
Lepto given by breeder, before import	1
Lepto... have heard of too many reactions.	1
Lyme	1
lyme- not proven it actually works	1
Lyme- not proven that it works	1
Lymes Giardia	1
lymes--don't want to give it	1

# Appendix A: Vaccinations

Q 2.21 Vaccines Avoided or Given that were not covered in survey questions. Reasons given.	Count
mother had a reaction to corona and leptos vaccines	1
My dog is in a wellness plan. They call me when a vaccine is due. He stays up to date on all his shots, his heartworm preventatives, etc. They seem especially concerned to keep him up on his lyme disease immunizations. I have a list somewhere of everything	1
My vet didn't think that leptos and corona were needed	1
No need for Corona vaccine	2
No vaccines will be given to this dog except possibly rabies (state law) due to immune system being compromised from puppy shots resulting in many allergies. Titers will be run annually.	1
oops -- I don't know anything about this (nor 2.20 above) -- sorry!	1
Personal belief	6
Rabies	1
Rabies are avoided	1
rabies never given on same day as other vaccines	1
Rabies will be given 2 weeks after 3 set of puppy shots, and then annually. This is a legal requirement for travel to the UK. Also kennel cough so he can go to shows. Also required here in France	1
Rabies. The dog is not exposed to situations where she would be exposed to rabies.	1
recommended due to allergies	3
See above. Rabies and distemper/parvo are avoided due to allergic reaction.	1

# Appendix A: Vaccinations

Q 2.21 Vaccines Avoided or Given that were not covered in survey questions. Reasons given.	Count
Several of my other Havanese have had severe allergic reactions to leptospirosis and corona.	1
There is a very high instance of leptospirosis in our area - lots of raccoons. The vet assured me an entire breed can not be allergic to a vaccine and that I had a better chance of saving my puppy from anaphylaxis than leptospirosis.	1
there is no corona in UK	3
This dog had leptospirosis and corona but does not anymore.	1
To be honest I am unsure which vaccines my vet gives at the yearly exam - I trust him to do what he believes is best.	1
Told by my breeder/mentor to avoid Leptospirosis vaccination.	1
unsure about vaccines except those recommended	1
was given 7-in-one shot for the second in her puppy series and had a very shocky reaction that lasted almost 24 hours	1
We don't need the corona vaccine.	2
We have not yet given rabies...I have a concern for a friend's Havanese who had a very bad reaction. I plan to wait as long as I can on this one...but I do need to comply with local dog laws.	1
We take our Havanese to the Vet and follow his advice on any shots or vaccinations she may need	1
Will only administer corona as a puppy. No adult corona. Will not administer leptospirosis due to allergic reactions in breed. No Lyme's.	1

# Appendix B: Personality and Style

Q 3.27 Aggression Toward Humans, "Other" Responses		
aggressive at first but then becomes friendly	He barks at strangers.	growls at males when there are girls around
barked at daughter once upon a time	He has barked excitedly at a few random persons...	growls if unsure and I am not around
barking at strangers - need 2 socialize more I kno	He will posture with his body.	growls when startled
barks	is dominat with my 7 year old, treats like litter	growls when tired and not wanting to be picked up
Barks	likes to "hump" older son - but no one else	when cleaning ears, i have to muzzle.
barks at men in home or visitors	may growl/snap(not bite) if rest is disturbed	When excited he will jump up to see you.
barks at new people	nipped the rescue owner once, never since.	when first arrived seemed capable of fear biting..
Barks at newcomers until she is familiar with them	nips when nails trimmed	
barks at strangers	occasionally growls when sleep is disturbed	
barks at strangers or strange noises	occasionally will nip when picked up by child	
barks bites gently and growls to force play	once growled and snapped	
barks when appropriate, doorbell, etc.	only at strange men she growls, but warms up	
Bit cable guy in her backyard Barks at strangers	people on the other side of the fence are subject	
Bit once, when person stood over /in her face	playgrowls with toys;agressive 1st wk of puppie	
Bit stranger 1x her new pups were "threatened"	protective rarely	
Bit stranger 1x her new pups were "threatened"	protective rarely	
Bit when younger, that has been corrected	puppy nips, growls for feeding sometimes	
Chases playing kids only, growls at strangers ente	She occasionnally won't like someone	
dislikes children, very shy will bark in a childs	She's mouthy...mouths hands	
does not like children	snapped once	
fear of strangers after event when puppy	snapped at young children	
grooming - pulling knots in hair will cause biting	sometimes with discipline	
Growled and hid in crate when new, not now.	tends to hurd humans	
growls a little at strangers but stops	testy when she has pups	

# Appendix C: Eyes

## Correction Summary

<b>The Following Corrections Have Been Made</b> to the tallies of dogs with "Problems in Lens" and "Eye Problems" in the summation of CERF reports used on page __ (These dogs had not been included in the numbers tallied from questions 4.3, 4.7, 4.8, 4.9 where specific eye problems were choices in the survey. These dogs' problems had been described briefly by the participants in a free choice window. )			
Total # Dogs in "4.7 Other Lens" Indicating a " <u>Problem in Lens</u> "	17 total	Males	6
		Females	10
Total # Dogs in "4.8 Fundus Other" Indicating a " <u>Problem in Lens</u> "	1 total	Males	0
		Females	1
Total # Dogs in "4.9 UVEA Other" Indicating a " <u>Problem in Lens</u> "	1 total	Males	0
		Females	2
Total # Dogs in "4.7 Other Lens" Indicating an " <u>Eye Problem</u> "	1 total	Males	1
		Females	0
Total # Dogs in "4.3 Other" Indicating an " <u>Eye Problem</u> "	10 total	Males	5
		Females	5

Many of the brief answers typed in the "Other, Please Specify" windows of the survey are printed in tables on pages 15 -18 .

**Add the Page #s up in the text in green**

Q 6.1 Dental Incisors Other
4 over 4
4 over 5
5 over 4
5 over 4
6/6 puppy teeth. 6/4+? teeth coming in
baby teeth
Couldn't hold his mouth open long enough to count
don't know - normal amount I guess
don't know answer
full dentition when younger - now losing teeth
has lost several teeth
Have to check
He is away today not sure
he still has baby teeth
None. Puppy mill rescue.
Not sure
Not sure which are incisors
not sure...he hates to have his mouth examined
PERFECT SCISOR BITE
puppy - don't know
puppy teeth
Sorry he's asleep! I think it's normal.
Started losing teeth last year
still losing baby teeth
teething
The best bite I have ever seen
unknown
unknown, probably 6/6, he is pointed

Q 6.4 Dental Problems 2 Other
anterior crossbite
bad breath occasionally
crooked teeth
crowded mouth
Dental Extractions with antibiotics stopped the ha
dog breath normal, but stinky sometimes
halitosis hardly noted after teeth scaling
Her teeth are a little loose
just slightly undershot, almost level.
level bite
Level bite, but top teeth pushed lowers slant out
missing premolars
no problems
nonnn
occasional slight halitosis
One top tooth is bruised
perfectly straight, white teeth, brush twice week
retained baby teeth
two top incisors are slightly behind the two lower

Q 6.3 Dental Problems Other
@ missing bottom pyppy teeth
4 retained pup canines
baby canines didn
baby canines didn't drop; had to be removed
bottom row crooked btm-correct bite
crooked front teeth
Crooked Teeth
extraction because baby teeth didn't fall out
Fang baby tooth had to be extracted
gingival hyperplasia
had 13 baby teeth pulled
Had 2 retained baby teeth.
had 4 retained baby canines, removed
had bad tartar but teeth scaled 2 wks ago
had tartar, removed
had tartar/decay, treated
he misses one of his P2 tooth
he only has a couple of teeth left
impacted rear molar
major over bite

Q 6.3 Dental Problems Other
@ missing bottom pyppy teeth
4 retained pup canines
Missing multiple pre molars - 12 teeth in all miss
missing teeth, crooked teeth
multiple teeth cleanings didn't slow
Needs to have tartar removed, may lose some premol
no more problems, no more teeth
none at age 9 months
puppy losing baby teeth
Retained puppy canines
retained puppy teeth
Scheduled for cleaning
She had two retained baby teeth needing removal
small overbite
standard tarter removal
Very mild tartar
Very mild tartar.

Q 7.11 Forelegs Bowing Other	Q 7.12 Forelegs Length Other	Count
appear straight but asymmetrical		4
bowing is very apparent but not as extreme like a	both toes turn out very obviously	2
equal-straight-symmetric		1
forelegs seems straight but dog is pigeontoed		1
has a "wobble" in his back left ankle		1
has improved over the last year	they seem equal, but slightly bowed	1
have soaped & photographed		1
He does toe out slightly		1
he has short legs. may be straight.		1
Her wrists turn out	Wrists on both legs turn out slightly	1
I have been told they are straight	I have been told	1
I plan on soaping her soon!!		1
left is slight		1
Legs are straight not bowed, feet turn out		1
medium bowed	they both bowed the same	1
one leg is a little further back than the other		1
Rt straight. L		1
she has short leggs		1
short, front	Short front, turns out	1
short-bowed-asymmetric-right		1
still a puppy	still a puppy	1
straight & equal		1

# Appendix E: Musculoskeletal

Q 7.12 Forelegs Length Other	Count
a little short on legs	1
appears asymmetrical	1
appears asymmetrical, short	2
Asymmetrical	1
both are equal in length	1
both legs bowed chest not level-toes turn out	1
both legs slightly bowed, equal in length	1
both leg's toes point out when sitting	1
Elbows out but equal	1
he doesn't live with me now and I can't find soaps	1
left appears longer	1
left toes turn out slightly. Possible jumping inju	1
Left very moderate bow	1
lengths equal, but both feet turn out	1
little easty westy	1
no, both legs are bowed but of apparent equal length	1
she has a very slight bow and her elbows and toes	1
slightly low on leg	1
they are equal length but not straight - see 7.11	1
toes point straight forwarrrd	1
two legs equal in length, tho not straight	1

# Appendix E: Musculoskeletal

Q 7.20 Hernia Other	Q 7.19 Dewclaws on Hind Legs Other	Count
	any dew claws were removed from the whole litter	1
	can't remember	1
	don't know--only vaguely know what dewclaws are	1
	I don't know	2
	I saw her, but don't remember dewclaws being there	1
	no did not do	1
	no idea	1
	one FRONT dewclaw	1
After C-Section		1
diaphragm		1

# Appendix E: Musculoskeletal

7.24 Other Important or Interesting Information That Should Be Part of This Study?		
	Yes	N/A or Didn't Answer
Number of Dogs	46	710

Q 7.24 Musculoskeletal Other Important Info
Arthritis diagnosed at 2 years of age. Impairment is significant enough from arthritis and LCP (which was repaired surgically) that she is not a candidate for surgery for CCL problem.
As far as I can tell, his being somewhat east/west in front is not radius/ulna involved. Elbows are in good position. Seems carpal area.
At age 2 this dog developed a skip or hop in the hind legs when running. There is no pain associated with it, and the vet had no explanation.
At age 3, he was diagnosed with masseter myositis, an autoimmune disease that attacks and inflames the muscles. He was treated with prednisone and made a slow, but satisfactory recovery.
Buster is a larger Havanese, bone structure would be large
Cow hocks (see many of these in the ring but its not on the survey) Roach back (survey should ask for topline structure)
Dislocated shoulder jumping off high place.
EYES: Cataract,rt eye. Rapidly developing at age 3, at age 4 it has matured, but is no larger. (Technically a CERF is not done on this kind of problem, and that was the only Q asked in the eye section.)
Had left leg tremor that got progressively better, gone by 5 months. I later heard of others in line with similar problems.
Had surgery for perineal hernia about 4 years ago. When he defecates he has difficulty pushing it out so we mix Metamucil with soaked dry food and 1 tbsp. of wet food twice a day.
has been treated with steroids-four rounds for back problems. Another large dog slammed into her causing problem

# Appendix E: Musculoskeletal

Q 7.24 Musculoskeletal Other Important Info
He can sping up very high, very easily - almost flies up on high beds, or jumps very high, very easily.
He had a femural head/neck excision due to the fracture of his left femur through growth plate.
He has a wonderful disposition.
He is a very sound dog and very sturdy. We are very pleased.
he is longer than tall as in the original type I began with
He licks his left foreleg a lot.
He was said to be equal bowed, assymetric left
head, chest and shoulders are stocky and strong in appearance.
her leggs were both bowed at one time. since on eggs, one straighten up and she became asymeric
Her legs are a little short for her body size. The breeder had not seen a body like it--said she looked like a "limousine".
Her uterus is tipped.
His front paws point outward at about a 45 degree angle.
His nose is much shorter than my two others who came from a great breeder and follow the standard.
I have been told she is small for her size. She is not a show dog, she is just a loved pet so I don't pay much attention to her characteristics.
I think his structure is very good.
length of back is just slightly longer from withers to base of tail than the dog is high
occasional hop/skip in the right rear - multiple test have shown no injury or abnormality. Can be exacerbated or diminished by certain gaits and speed.
OFA elbows - normal

# Appendix E: Musculoskeletal

Q 7.24 Musculoskeletal Other Important Info
Our dog was a puppy mill rescue, given up when he couldn't produce puppies anymore. His rear legs are bowed, inner thigh muscles atrophied due to an enlarged, infected prostate.
Protruding breastbone. More than any other dog I've ever owned.
Seems to be a problem with back right leg. Dog occasionally hop/skips.
She is a little too long in body.
She is healthy, strong and beautiful.
She is long in body and roaches slightly when moving. She moves stiffly.
Surgery on both knees.
tail set is awful. She carries it straight up.
The front of this dog (soaped pictures) were evaluated in Texas by the HRT team (this is a Hav 100 dog) and the diagnosis was equal - bowed- symmetric.
This dog had been evaluated as part of the Hav 100 study and was evaluated by the team at Texas and was determined to be short, straight, and symmetric.
this dog has a more heavy build and is longer in structure than he is tall. more of a rectangle shape.
This dog has had a problem with his right rear ACL tendon. It was a sprain/strain. Not torn.
This is the 2nd report on my dog. When I first reported, he had a stressed right ACL. It has progressed to both ACL's being torn & needing surgery. The surgery is scheduled for June 3rd.
we think he may have a slight "roach back"
well boned, substantial, sturdy
wide rib spread
x-rays involved were to determine the cause of the Hop-Skip. Results were normal and it appears not to have worsened 1 1/2 years later.

# Appendix F: Skin

Q 8.5 Skin Problems Other
sores
formerly pink/brn stained; diet change now white
alopecia
Normal skin
very thin hair in areas
Local reaction to rabies vacc.
little pimples, cysts
Small Sores - Head, Neck Area
she was negative for SA.
He has a wart
no problems

Q 8.5 Skin Problems Other
had pollen allergies causing itching as a puppy
localized itching; not hot
Fungus
Itchy neck and ears with no visible signs
chews front feet
chews on feet
mild dermatitis with orthokeratosis
chews front feet sometimes, no sores tho or flaky
crusty spots in the ears
one spot: could be staff infection
Nose leather is extremely dry
an area on one side that is sometimes sensitive
very itchy, no sores or inflammation
localized pimple-type spots, gone now

# Appendix G: Allergies

8.15 Other Causes for Allergic Reactions (36 Answered)	
Count	Allergic Reaction Cause Other
1	2nd puppy shot (corona?)
1	Bord/rabies/dist/parvo/cor/lepto given same time
1	DHLPP+CV (2nd puppy shot)
1	DHPP
4	Lepto Vaccine
1	Parvo Vaccine
1	Rabies and Distemper/Parvo
3	rabies vaccine
1	rabies/ large lump at the site for almost 1 week
1	Believed to be Lepto
1	vaccinations; whitefish
1	5in1 and rabies same day
[17]	

Count	Allergic Reaction Cause Other
1	oxytosin
1	prednisone
1	morphine
1	internal sutures used when spayed
1	Frontline
1	Benadryl
1	Bio spot
[7]	
1	blackflies
1	Flea
[2]	
1	chemical in shampoo or conditioner
1	human shampoo
1	one type of shampoo
[3]	
1	after rain mushrooms
4	food
1	food (chicken)
[6]	

# Appendix G: Allergies

Q 8.16 Allergic Reaction Symptoms Other
staph infection set in
Swelling of face
alopecia
hair loss at site and peeling skin
large lump from rabies vac
infection/body expelled the sutures
swelling at the mouth
dysphagia/swelling of mouth
tired, sad, personality change
lump
sneezing
hair loss at sight (temperary)
After given Heartworm med limp/shocklike
legarthy
it went away w/o treatment.
Seizures
eyes and face swelled
licking
Occasional loose stools

Q 8.16 Allergic Reaction Symptoms Other
Swelling of face
breathing problem
mouth swelling
swelling of lymph nodes, increased respiration
agitated, restless
swelling in the face
poisening
wired, restless behavior
Lethargic when given rabies & other vacs together
lethargy, no appetite
lethargy
swollen lymph nodes
eye rim inflamation, cyst and fever
bloody diarrhea
hair missing on application site
depression, lethargy
swelling of face

# Appendix H: Reproduction

## Reproduction •Offspring Comments

11.10 "Other" Comments About Problems of Offspring	
1	CD?
1	1- blind when eyes opened
1	1 cataract; 3 cherry eye,
1	1 overshot 1 undershot
1	2, ppm, iris to iris
1	all in litter died
1	autoimmune inflammation of muscles.
2	Cherry eye, 1 offspring
1	cherry eyes
1	distichias; bowing of front legs,
1	highly sensitive to shampoo chemical, insect bite
1	neurological congenital defect of unknown origin
1	one had an allergic reaction to shots and now chews
1	One litter of 7 had 4 Parrot mouths and 1 undershot

1	One over and one under bite
1	one puppy over bite
1	one uni (deaf)
1	one uni (deaf), two cherry eyes
1	one unilateral deaf
1	One over and one under bite
1	PPR iris to iris
1	pups are only 8 months old-so far all healthy
1	severe over bite
1	short symmetrical equal legs
1	Unknown.
1	wry mouth

# Appendix H: Reproduction

## Reproduction • Additional Information

Count	11.15 Additional Reproductive Information
1	was losing hair especially on the trunk area, diagnosed as producing too much estrogen, thus the decision to have her spayed, also came in heat more than normal
1	8 days after the first tie of breeding, she developed an onset of diarrhea which did not stop for 2 weeks.all types of testing was performed, cultures etc. nothing found
1	also need calcium injection sub _Q to help with harder contraction to move the pups along.
1	At age 7, she was CERFing Clear, Normal hearing. She did have Pyometra, and I sent her in to spay her. I also asked them to check as I thought she had a urinary infection. They found a stone; did both surgeries. She died during the night 4 days later.
1	because she was not bred on one of her cycles, at the age of 3, she developed pyometra.
1	Bitch had stillborn pup. Taurine level was low. Began taurine supplementation and had normal litter next time. Discontinued taurine but kept up with eggs and another normal litter was produced.
1	Came in first heat at 8 months.
1	developed pyometra after her first heat and was spayed
1	Easy whelpings, very quick and big puppies at birth about 7oz all of them in every litter.
1	Eclampsia experienced on day 10 post-partum on 3rd litter, requiring emergency care, IV calcium, despite receiving oral calcium supplements after delivery. Spaying occurred after eclampsia.
1	egg litter

# Appendix H: Reproduction

## Reproduction • Additional Information

Count	11.15 Additional Reproductive Information
1	First c-section only one puppy, 2:nd one one puppy was dead and was blocking the birth canal
2	first heat cycle at 15 months
1	First litter planned for later this year.
1	First pup in first litter had traumatic evisceration. She jumped out of box and pup shot out, hit end of cord and it's intestines spilled out. It was euthanized.
1	Great mom, recovers quickly. Absorbed 2 puppies in first litter, 1 in second litter.
1	heat cycles every 2 months with bladder infections and impacted anal glands...these problems improve with antibiotics and are NEVER present when she is NOT in heat.
1	I am unsure if my female every produced any litters. She was not spayed when she was found by the NYC CACC, and was spayed by the CACC before they would release her to me.
1	Intact female that "may" have had pups; she was spayed 6 mos. after we adopted her
1	Lost most of hair within 2 weeks of delivery. Wanted to remove one puppy from rest of litter for 3 weeks then stopped the action. Never refused to feed puppy but would try to hide it in some other part of the room away from other puppies (all 6 were femal

# Appendix H: Reproduction

## Reproduction • Additional Information

Count	11.15 Additional Reproductive Information
1	Missed pregnancy was with our proven stud. Some testing will take place before next heat cycle.
1	My dogs eye tests are registered in an official database in our country ( just as CERF)
1	one litter had two premature pups... they survived with the use of an incubator and supplementation
1	One pup in last litter, when bitch was 8 years old, was not "right" and died within 24 hours.
1	oxytocin was given at the conclusion of one delivery because we thought there was another puppy (Whelpwise), but there was not. Becomes very defensive of pups during first few days (snarling)- eclampsia?
1	she also produced one undershot jaw puppy, two puppies with retained testicles, one puppy with pulmonic stenosis
1	She developed hypothyroid and last litter was born on 58 day. All pups stillborn.
1	She had a fang retained that we operated at 5 1/2 months old
1	She has a tilted uterus.
1	She reabsorbed two puppies in the second litter, the two came out as 2 inch 'balls' Th reaction to the rabies vacine also happened to the BC that had the vaccination at the same time
1	This bitch did not "fill out"/gain enough weight for her height until she got her first season at 15 months. Since then, she has flourished.
1	two pups in second litter were premature (delivered day 58) survived with no ill effects/ used incubator/oxygen&heat& supplementation

# Appendix I: Neurological

# Appendix K: Miscellaneous

**Health Issues Considered Important to the Survey Dog and to the Havanese Breed Presented as entered by Survey takers with some spelling corrections. (New topics have been put in Bold Type)**

Miscellaneous Health Issues
<b>Incidence of retained puppy teeth</b> seems fairly common in the breed and perhaps should be addressed. Under coat type, whether wooly, silky, etc.? My two have totally different coat types.
She had a pea size <b>cyst</b> on near a nipple; both the cyst and the nipple were removed, not cancerous.
Please tell all Havanese owners not to allow the dogs to have <b>greenies bone</b> to chew on. My pup almost died if not for surgical intervention (emergency).
This Hav was adopted last Dec from a bad home at 2 years old. She was under weight, unsocialized, not spayed, lived in a kennel outdoors with other bigger dogs and was on a very poor diet (don't know what). She had a lot of diarrhea, worms, bad ear infection
<b>Collapsed trachea</b>
Collapse trachea coughing spells that need prednisone 5mg (in order to stop the coughing)
He has had a bad <b>reaction to the drug Duramaxx</b> .
Always dribbles urine when excited. Vet found no cause. Might be age related as he is just 5 months.
She may have <b>sensitivity to certain anesthesia</b> . Had problems during her first attempt at being spayed. She vomited up a lot of blood and a black substance. Her second attempt was successful and went very smoothly.
Just the one <b>local lump/hair loss due to the rabies vaccination</b> , the most recent one. Hair is growing back, lump is gone, and skin area is darker right now.
As a younger puppy her teeth appeared to be slightly undershot which changed at about 7 months to a good bite.
<b>Frequent hiccups</b> -- this is the first dog I have owned who hiccups so regularly
<b>Excessive thirst and urination</b> with no reasonable explanation. High metabolism but maintains weight and bloats after drinking water. Has been tested with no abnormal results or disease noted. There are <b>2 types of ears</b> in this breed. Large thick ear le

# Appendix K: Miscellaneous

## Health Issues, Continued

This dog is very **touch sensitive**. He was a C-Section resulting from the advice of the Whelp Wise staff. Mother had braxton hips contractions 10 days prior to her 58th day of pregnancy. Mother give many meds to stop contractions removed from meds one day

**Anal glands**, she had a little impact, the only sign was her tail down for two days.

Only health issue has been Kennel Cough

He is a very picky eater - what he likes varies from day to day, sometimes won't eat.

Our Havanese is now on a Special Vet Diet (IVD) to keep his Inflammatory Bowel Disease under control. He still throws up between 1 & 3 times a month.

Very healthy; has had **protasteititus**

This dog was perfectly healthy before spaying and seizures started one week after, spinal tap showed nothing unusual, seizures could not be controlled by medication. Have always wondered what was the cause of this beautiful dogs' death. Sudden **unexplained death**

Since we are not in USA we don't register with CERF, but the eye test result is officially registered with the kennel club

Many **allergies caused by vaccination** (have been told to do no more vaccines on this dog)

This dog has **lost the pigmentation on most of his nose**, but not the eye rims. It is not "snow nose", it doesn't come and go depending on exposure to the sun, and it is constant.

Sadly he is a '**poop eater**'

He had vomiting & diarrhea at 6 months - don't know why. Vomiting and bloody diarrhea again at 10 months. As a puppy, **vomited about once a month**.

Due to difficulty with her litter and large size, Abby was placed with a new family and neutered at 4 1/2 years of age.

He did have a **calcium deposit** removed from his right haunch. He was tested for Cushing's' but the report was negative. No more deposits or Cushing's' symptoms.

# Appendix K: Miscellaneous

## Health Issues, Continued

<p>This dog experienced sudden onset shock and collapse, ingestion ruled out. No cause was found, extensive blood &amp; endocrine work up all negative</p>
<p>1. I think <b>tear stains</b> are too often overlooked and just treated as normal for the breed. If they're normal, then they would all have it. Seems like breeders should look into what is really causing this unsightly condition. 2. <b>Car sickness</b> seems to</p>
<p>I believe the <b>cataract and the head tremors were caused by the six month injection for heartworm prevention</b>. This med has not been repeated. The head tremors disappeared and the cataract has spontaneously dissolved (about 85% gone). The punctate in the o</p>
<p>Vet fist thought he had <b>immune mediated vasculitis and polyarthritis</b> last fall. We also removed a tick at this time but did not check tick. Have had 6 Lyme tests, 2 positive and 4 negative. We treated him with Pred for Immune problems and Antibiotics f</p>
<p>She was bought knowing that she had an <b>imperfect coat- short fur on face and all four legs</b>. Her fur has all grown in except is a little shorter on her hind legs. Facial and front leg fur is now long.</p>
<p>There seems to be very few that have or will admit to having this <b>Hop-Skip disorder</b>. A consensus is forming around it <b>may be neurological but nothing thus far is conclusive</b>.</p>
<p>This dog has <b>compensated autoimmune thyroiditis</b>...this means that her thyroid levels are currently normal but she does have elevated auto antibodies so there is a real probability that she will become hypothyroid at some point in the future. Her T4 level is</p>
<p>Tear staining</p>
<p>Does have a fairly <b>obsessive/compulsive licking</b> habit but it has not been diagnosed by anyone. We just live with it.</p>
<p>Recently had surgery to remove benign fatty tumor in chest</p>
<p><b>Enlarged prostate</b>, but in the proper position as per radiograph. <b>Persistent soft stool</b>, not formed, unless on a high fiber diet. Dog was tested for parasites, cultures done, excellent absorption of food/nutrition according to tests, however soft stool</p>

# Appendix K: Miscellaneous

## Health Issues, Continued

I've had concerns over his "**lethargy**" as compared to his brother. Vet can find nothing wrong (EKG and thyroid tests). Changed vets and diet.

One bout of **hammoagic gastroenteritis**

On this dog's eye exams; different eye doctors reported a different size cataract in the right eye. Intermediate and punctate. The cataracts that were reported in the left eye were pigment dots from ppm's, but are still called cataracts, so I checked ca

The cataract development coincided with housebreaking problems shortly after a move from Arizona back to Seattle to a new home.

Had problem with diarrhea and loose stools; was suspected to have **colitis & then IBS** per symptoms; then was suspected having allergies and was put on Canine Z/D Ultra, brought to baseline, and now she eats normally and has firm stools although does not to
